APP FLOW & PROTOTYPE

TaskFlow

27 screens of the TaskFlow web app, built from its React front end and linked into a clickable prototype, in light and dark.

Try the prototype

Open the Screens page (or Screens (dark) for the dark copy), select any screen and press Play.

Three starting points are set: Signed out (Home), Signed in (Dashboard) and the Error page.

Every sidebar item, the user chip and the project and task links are clickable.

Main paths

Sign up: Home → Create account → Verify email → Sign in.

Sign in: Home → Sign in → Sign-in code (2FA) → Dashboard.

In the app: projects open Project detail, tasks open the Task detail panel, and the user chip opens Profile.

Notes

Names, numbers and the permission grid are illustrative sample data.

The four project views (Team tasks, Workload, Timeline, Gantt) open from Project detail and link to each other through their tab bar.

Colours are the app's tokens with Light and Dark modes. Reusable parts are on the Components page.
